High levels of *Enterococci* bacteria (highlighted in red) are often indicative of other microorganisms present in the water which could cause illness such as gastroenteritis, ear infections, etc. It is generally recommended by the U.S. Environmental Protection Agency not to swim in water containing *Enterococci* counts that have an average value exceeding 35 cfu/100 mL or a single sample result of more than 104 cfu/100 mL.

8/5 was due to Tropical storm Isaias
